

Quarterly Signal Fund

Overview of Approach

- ▶ ML models extract **signal from quarterly results** posted by **NIFTY 500** companies
- ▶ Positions entered across a 3-day entry phase **every quarter** after SEBI filing deadlines (45–60 days after quarter end)
- ▶ Model output scores combined with **historical volatility** to construct a **stock portfolio** emphasising low drawdowns
- ▶ **Exit strategy** uses take-profit / stop-loss

Key Innovation

*The ML model predicts **relative** outperformance vs. the market — not absolute returns.
Combined with a **fundamentals-for-entry**, **technicals-for-exit** approach to limit downside.*

Rolling Window Training

10-year training window slides forward annually — no future data leakage

Result Each window produces probability scores for every Nifty 500 stock in the prediction year

Features used to Extract Signal

Feature distribution across categories

Outperform the Market : Strategy 1

Strategy 1 · For Wealth Generation

Portfolio vs Index: 201702 to 202511 (Initial Capital: ₹100 Cr)

Calendar Year Returns Heatmap

Strategy 1 · Performance Summary

Trailing Returns (%) as of **February 13, 2026** · Backtest period: **2017–2026** (9 years)

TRAILING RETURNS (%)

	1 mo	3 mo	6 mo	1 year	3 years	5 years
Strategy 1	0.22	1.66	1.23	9.03	20.36	23.36
NIFTY 500 TRI	-0.60	-2.09	3.62	8.65	17.29	15.53
